

Palmer-Gosnell Management selects WebDrive for Internet File Management

Palmer-Gosnell Management, Inc. is a hotel management and development company. The company currently has several hotels, a corporate office and an operations office. With users in multiple locations, the need to access and share important documents is critical to the success of the business. Emailing the documents was inefficient, and often resulted in loss of data.

“WebDrive had the feel of Windows and was user friendly and easy to set up”, says Mary Ryan, IT manager for Palmer-Gosnell. “We quickly had a Gigabyte of information online without having any problems or issues. We use WebDrive to archive old files, share files, store files and for backups.”

In addition to solving the issues of sharing and backing up files from multiple locations, WebDrive provides access to senior management, who are often traveling. Files can be accessed from any place that they can get an Internet connection. “This alone has proven invaluable in times of emergencies. WebDrive is truly an asset for any business with multiple remote sites.”
